

SMART Notebook is no longer automatically installed on district computers but can be added by any employee when needed.

1. From the search tool, look for Software Center.

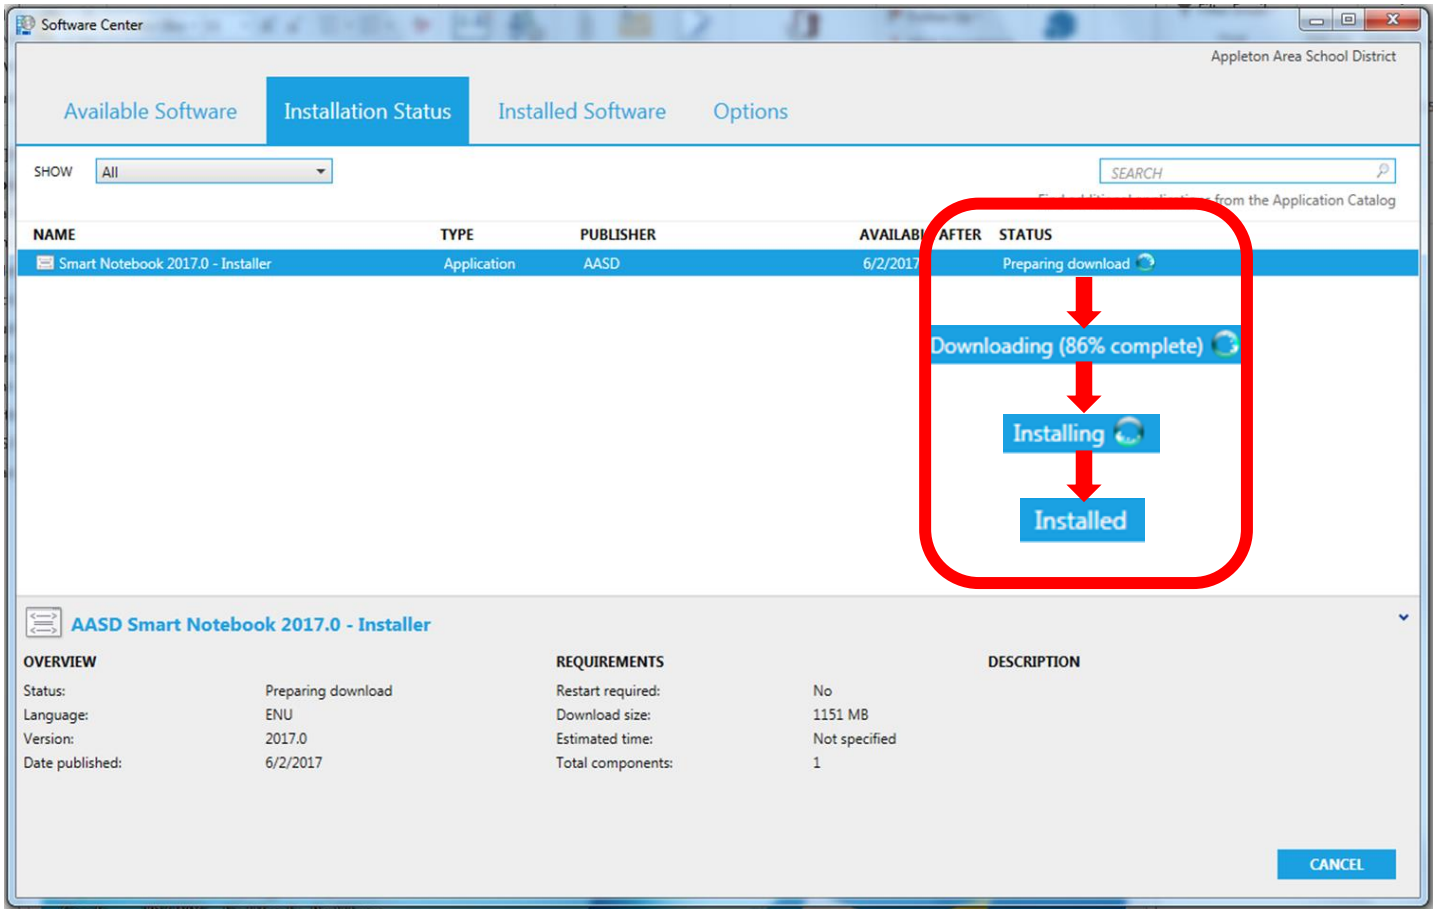

2. Choose Smart Notebook 2017 from the list of available software and Install Selected.

NOTE: Your Smart Notebook Icon will appear before it is completely installed. You MUST WAIT until you see the installation is complete (see below).

3. You can then monitor the progress of the installation in the status field of the software center.

4. If you try and open the program and it tells you it has "Failed". Restart your computer and repeat steps 1-3.
